

TOP MIX

2025

Zoltán Papp

Tibor Papp

József Papp

**4x Team World Champion
1 x Individual World Champion
5 x Hungarian Champion**

You are holding the 2025 TOP MIX catalogue in your hands – we hope that alongside our proven products, you will also discover new items that suit your needs.

In addition to producing baits and groundbaits, our company is increasingly focusing on developing, manufacturing and distributing essential fishing accessories.

We do not release any product to the market that has not successfully passed our multi-stage testing process.

Decades of angling experience guarantee that we provide quality at an affordable price.

Our company's founder, József Papp – individual world champion and four-time team world champion, as well as five-time Hungarian champion – pours all his expertise into our products.

János Varga
2 x Team World Champion
1 x Hungarian Champion

Ferenc Hoffmann

Ernő Kerekes

István Csike
4 x Hungarian Champion

Of course, our competition and test anglers also play a major role in this.

János Varga, individual method champion; **János Petrovics**, **Richárd Petrovics**, **Zoltán Papp**, **Ferenc Hoffmann**, **Ernő Kerekes** – all team champions of Hungary; **István Csike**, who has won two national titles in his categories – and many others are ranked among the top 40 in the method feeder discipline.

Listing all our anglers' successes would take too long – but we are equally proud of every single one.

In the year ahead, we will continue to meet all needs, introduce new products and ideas, and remain a useful, innovative part of the fishing communities both at home and abroad.

Thank you for your trust over the past years – without you, we wouldn't be here – and we look forward to seeing you again in 2025.

Follow our social media pages all year round – we'll keep you updated with special offers, tips and insights from our competition experience.

Fish with us!

PRO SERIES

CRUSHED Method Mix

TM044 Green GLM Method mix

A medium-coarse feeder groundbait made from high-protein crushed pellets, LT fish meal, green-lipped mussel extract, spirulina, and crushed seashells. Due to the nature of its ingredients, it has a strong, intense fish and mussel aroma. After mixing, the shiny shell fragments create an eye-catching effect, further enhanced by their crunching sound underwater. A true all-season carp delicacy that fish happily consume at any time of the year.

TM049 Bloodworm Method Mix

A fine-ground blend of bloodworm extract and various fishmeal-based pellets. The bloodworm gives it a red colour and a strong larva flavour and scent. It dissolves quickly and takes effect in a short time. Its fine grain size means fish do not fill up on it easily, so they stay at the feeding spot longer. Primarily recommended for the method feeder technique, but it can also be used in a traditional cage feeder. This is a true all-season groundbait, as fish feed on bloodworm all year round.

TM054 Hellfire Method mix

A red, fish-based groundbait with an extra strong spicy blend, developed for the method feeder technique. Completely homogeneous, with a fine grain size of 0.8 mm, made from a mix of various pellets and designed to break down very effectively. Especially effective on heavily fished lakes. Caution: do not touch your eyes or mouth with hands used for mixing!

TM043 Carp Specimen Method mix

A coarse-grained, high-protein and high-carbohydrate groundbait developed specifically for carp anglers. Made from a blend of crushed pellets, flavoured with a squid—octopus aroma mix, and also contains whole pellets. The mix includes crushed Red Halibut, Premium Carp, and corn germ pellets, made even more appealing to carp with added amino acids (L-serine, L-glycine, L-alanine, L-lysine). Its carbohydrate additives meet the carp's energy needs, while its Omega-3 fatty acid content promotes fast digestion.

Zoltán Papp

TM045 Krill Method Mix

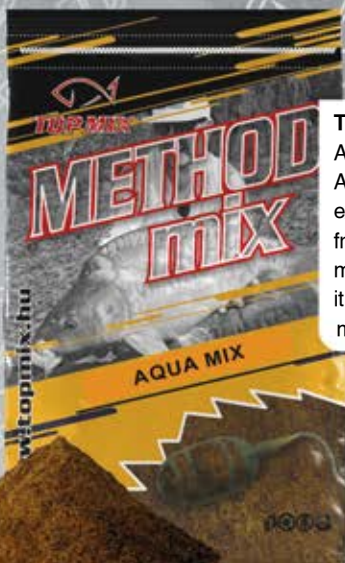

Produced using a special pellet-crushing process, KRILL is a lightweight, high-protein, fishmeal-based method mix that is ideal all year round. This groundbait is made exclusively from a blend of highly digestible crushed pellets with added krill meal, which immediately encourages coarse fish to feed without filling them up.

TM051 Choco-Orange

A top-quality groundbait made from a blend of crushed COPPENS pellets with a protein content exceeding 40%. It has an intense chocolate-orange scent and a medium-fine particle size. For enhanced attraction, we enriched it with fluoro orange pellets. A year-round bait suitable for all seasons.

Method Mix

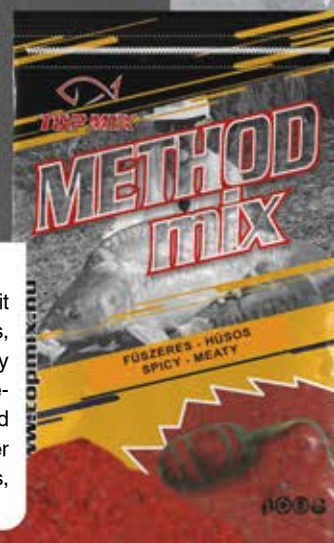

TM183 AQUA MIX

A groundbait made from the finely milled blend of the popular Aqua grower pellets. We have created a mix that, based on our experience, has an even stronger impact on fish. Fish stocked from fish farms are well familiar with these pellets, as more and more hatcheries use them for feeding. Naturally flavored, so it can be enhanced with flavor additives as desired. Recommended for Carp, Crucians, Bream, and Sturgeon.

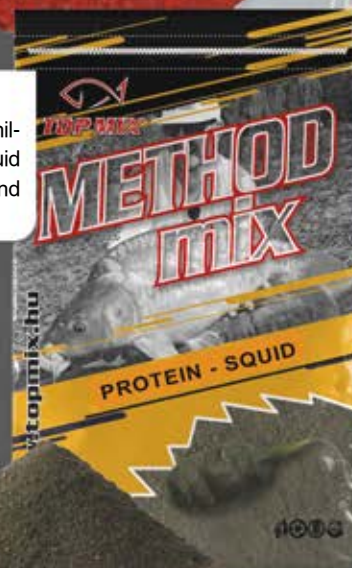

TM169 Spicy-Meaty Method Mix

A uniformly fine-grained, raw-meat-colored groundbait containing micro pellets. It is a blend of various pellet meals, fish meals, spices, and meat extracts. The Spicy-Meaty Method Mix is a perfect choice for targeting large fish species such as carp, bream, tench, and barbel. It can be used in different ways depending on the fishing situation. After wetting, mix thoroughly and let it rest for 15–20 minutes, then it is recommended to sieve it for the best texture.

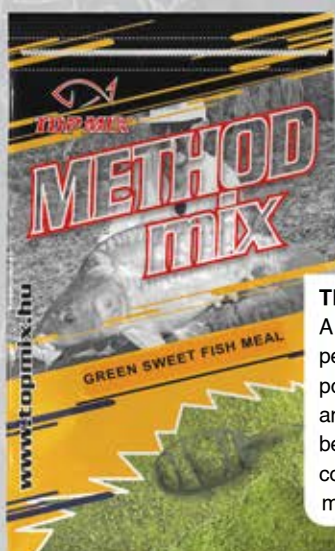

TM170 PROTEIN SQUID Method Mix

A dark-colored groundbait made from the finely milled blend of high-protein pellets, also containing squid meal. Designed for the Method Feeder technique and primarily recommended for warmer waters.

TM039 Green Sweet Fish Meal

A special 50-50 complex blend of high-quality fishmeal pellets and sweet biscuit ingredients. Thanks to its composition, it triggers a quick feeding response from the fish and keeps them in the feeding area for a long time. It can be effectively used year-round, both on heavily stocked commercial lakes and on more natural waters, where the main target species are carp and crucian carp.

János Petrovics

TM172 Garlic Roasted Liver Method Mix

A high-protein groundbait specifically designed for warm waters, made from the milled blend of various carp pellets and a highly effective aroma mix. Especially recommended for carp fishing.

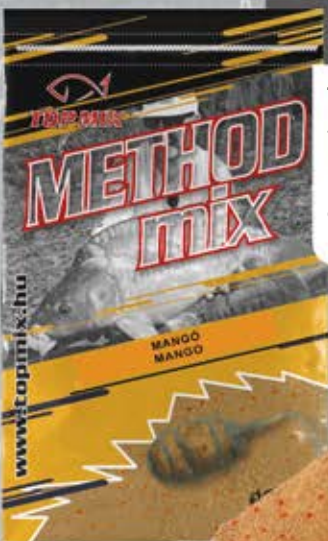

TM040 Black Velvet Method Mix

A uniformly fine-milled, black-colored feeder groundbait with a unique aroma blend and without fishmeal. It also contains finely ground sweet fluoro crumb, making it even more attractive to fish. Suitable for use throughout the entire season. After mixing with water, let it rest for a while, then mix again thoroughly and, if desired, pass it through a fine-mesh sieve for an even better texture.

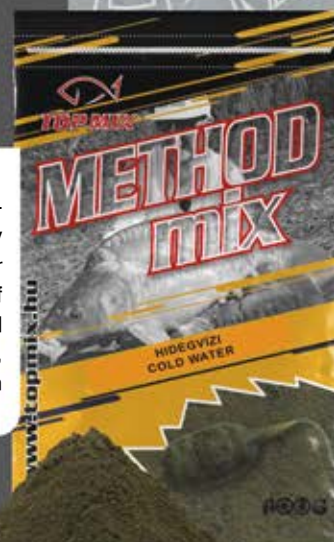

TM175 Red Velvet Method Mix

A uniformly fine-milled, red-colored Method Feeder groundbait made without fishmeal, featuring a unique strawberry-yogurt aroma blend. It also contains finely ground sweet fluoro crumb, making it even more attractive to fish. Suitable for use throughout the entire season. After mixing with water, let it rest for a while, then mix again thoroughly and, if desired, pass it through a fine-mesh sieve for optimal texture.

TM042 Mango

A groundbait made from a blend of milled carp pellets, flavored with nature-identical mango aroma. This unusual combination creates a perfect harmony. A true all-season bait. It works well in cold waters during late autumn or early spring, but can also be highly effective in warmer periods. Equally suitable for carp and crucian carp fishing.

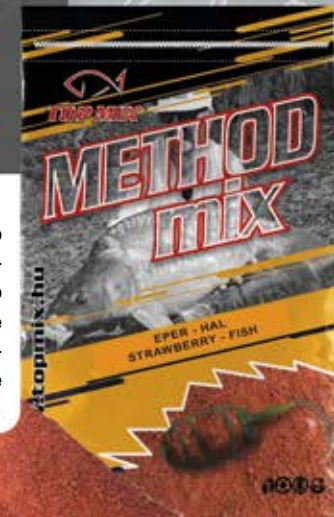

TM041 Cold Water Method Mix

A high-protein, uniformly fine-milled, black-colored, fishmeal-based Method Feeder groundbait with cranberry and coriander aroma. The black color is essential for clear, transparent waters typical of winter, regardless of the bottom color. This is the ideal bait for late autumn and early spring waters. After wetting, let it rest for a while, then mix again thoroughly and, if desired, pass it through a fine-mesh sieve.

TM173 Green Spicy Method Mix

The Green Spicy Method Mix is made from a blend of various carp pellet meals. Its special and highly effective aroma blend makes it suitable for carp, bream species, and crucian carp fishing from early spring until late autumn. Its unique spicy character, unlike anything else, acts like a magnet for fish, attracting them to your hook even when they ignore other attractants.

TM166 Strawberry-Fish Method Mix

A year-round groundbait made from a mix of milled carp pellets with added strawberry and fish flavors. Strawberry is perhaps one of the most effective aromas for carp fishing, while the high-protein pellet meal fully meets the carp's energy needs. Suitable for cold waters in late autumn or early spring, but it can also be extremely effective during warmer periods.

Method Mix

SECTOR 1

The Sector 1 groundbait family, recognizable by its red packaging, contains no fishmeal-based ingredients. These products are made from carefully selected, guaranteed quality components. They can be used with any fishing technique, including Method Feeder, long hooklength, or cage feeder fishing.

TM146 Sector1 Color Carp

A sweet-style groundbait made with partly roasted additives, specially developed for carp and crucian carp fishing. The yellow particles are from the Red Factor additive by the British company Haith's. Once mixed with water, the bait almost doubles in volume, the particles separate nicely, and with correct wetting, it doesn't require sieving.

TM147 Sector1 Super Carp

A super groundbait for special situations! We invested the most time, effort, and fishing experience in developing this mix. This fine-grained, high-carbohydrate blend contains roasted and raw seeds, without any added flavor, corn, or fish-based ingredients! To prepare one bag, 200 ml of water is required. It can become a true favorite even among Method Feeder anglers.

TM148 Sector1 Maxxx Corn

A natural corn-scented groundbait, free from artificial flavorings and colorants, made from various processed corn derivatives. It dissolves extremely quickly. It delivers the best results in waters where fish have already grown wary of heavily flavored and fishmeal-based groundbaits. Suitable for use both in early spring as waters warm up and in fully warmed waters later in the season.

TM149 Sector1 Bream

A brown-colored, finely milled, sweet competition groundbait made with natural spices and Oreo biscuit as a key ingredient. It absorbs little water. After proper mixing, you get a light, fluffy, and easily crumbling texture. If extra weight is needed, clay can be added.

The silver-gray packaged products in the Sector 1 series contain a high percentage of premium quality, carefully selected pellet meals and fishmeal. All four mixes are fine-grained and break down quickly in the water.

TM143 Sector1 F1 Carp

A light brown, fine-particle, sweet-fishmeal groundbait. Thanks to its special sweet aroma and ingredients, this is a true all-season mix. Not only irresistible to carp but also highly attractive to larger bream and crucian carp.

TM144 Sector1 Super Green

A green-colored groundbait with very high protein content and a strong fishmeal base. Extremely fine-grained and fast-breaking. Due to its quick dissolution and strong clouding effect, it rapidly draws fish towards your feeder.

TM142 Sector1 F1 Dark

A dark-colored, fine-particle, sweet-fishmeal groundbait. Thanks to its special sweet aroma and ingredients, it is a true year-round mix. The dark color makes it ideal for tricking cautious fish. Not only carp but also larger bream and crucian carp eagerly respond to it.

TM141 Sector1 Maxxx Fish

A dark-colored, fine-particle, sweet-fishmeal groundbait. Thanks to its special sweet aroma and ingredients, it is a true year-round mix. The dark color makes it ideal for tricking cautious fish. Not only carp but also larger

TM137 Sector1 Spray Mango
TM138 Sector1 Spray Sweet Pineapple
TM139 Sector1 Spray Squid
TM140 Sector1 Spray Butyric Acid

Sector1 Spray

Aroma sprays available in flavors matching the Sector1 Wafter hookbaits. We bottled only the flavors we found to be the most effective and best-proven. These liquids are highly concentrated aroma boosters, quickly attracting fish to your hookbait. They also contain coloring and clouding agents for an even more intense effect!

VB Szege

Sector 1 Wafers

No winning bait range would be complete without a top-performing wafter! These hookbaits are made from the best currently available base materials and flavors. Their buoyancy is carefully adjusted so that even the thinnest bait spike on the smallest hook can hold them down. The moderate solubility makes these dumbbell-shaped baits even more irresistible. To ensure versatility in all fishing situations, each tub contains both 8 mm and 10 mm sizes.

TM131 Sector1 Wafers Mango
TM132 Sector1 Wafers Sweet Pineapple
TM133 Sector1 Wafers Squid
TM134 Sector1 Wafers Butyric Acid

Sector1 Box

A carefully selected special blend of fishmeal-based pellets that perform even under competition conditions. The different pellet types have been designed to offer the right solution for any fishing situation—whether it's winter, summer, or specialized big fish targeting. Each box contains 400g of pellet mix, a small jar of Sector1 Wafers hookbait, and a betaine-enriched liquid for mixing.

495 Sector1 Pellet Box — Cold Water
496 Sector1 Pellet Box — Summer
497 Sector1 Pellet Box — Premium
498 Sector1 Pellet Box — BIG

Retro Fishing — Dynamic Carp Feeding Pellets

A Method Feeder pellet family developed from years of experience, consisting of a complex blend of four types of AQUA pellets and colorful sweet pellets. Thanks to its fishmeal-based, protein-rich content and attractively colored, carbohydrate-rich ingredients, it triggers a fast feeding response and keeps fish in the feeding area for a long time.

TM298 Dynamic Carp Feeding Pellet — Paprika Bread

TM299 Dynamic Carp Feeding Pellet — Garlic Fried Dough

TM300 Dynamic Carp Feeding Pellet — Plum Brandy

Retro Fishing - Economic Complete Mix

One of our most popular groundbait families for many years. These groundbaits come ready-to-use, with no additional wetting required. Simply open the bag before fishing and fill your feeder! For an even more consistent breakdown, sieving is recommended.

TM062 Economic Complete Mix — Paprika Bread

TM063 Economic Complete Mix — Garlic Fried Dough

TM076 Economic Complete Mix — Honeycomb

TM097 Economic Complete Mix — Plum Brandy

Retro Wafers 8mm és 10mm

The Top Mix Retro Wafers range was developed for feeder anglers who prefer highly attractive, dissolving hookbaits. These are lightened pellets, but only just enough so that even the smallest 8 mm sizes can still be used with fine bait spikes and size #14 hooks. Their dissolution rate is intense, making them an „open bait”, meaning they attract fish not only with their aroma but also with their nutritional content.

Retro — Aqua Nitro Boost Gel

Developed specifically for Method Feeder fishing and especially for Aqua Garant pellets, but also highly effective with fine tackle or cage feeder techniques. This thick aroma gel spreads horizontally along the bottom, creating a strong „smoke effect” that stays close to the feeding area, preventing the current from carrying the scent away with the fish. Its intense aromas attract fish right next to your feeder, encouraging quicker bites. PVA friendly product!

TM107 Aqua Nitro Boost Gel — Paprika Bread

TM108 Aqua Nitro Boost Gel — Garlic Fried Dough

TM117 Aqua Nitro Boost Gel — Honeycomb

TM251 Retro Wafers 8mm — Paprika Bread

TM252 Retro Wafers 8mm — Plum Brandy

TM253 Retro Wafers 8mm — Garlic Fried Dough

TM254 Retro Wafers 8mm — Honeycomb

TM255 Retro Wafers 8mm — Zizi (Candy)

TM256 Retro Wafers 8mm — River Pebble (Dunakavics)

TM257 Retro Wafers 10mm — Paprika Bread

TM258 Retro Wafers 10mm — Plum Brandy

TM259 Retro Wafers 10mm — Garlic Fried Dough

TM260 Retro Wafers 10mm — Honeycomb

TM261 Retro Wafers 10mm — Zizi (Candy)

TM262 Retro Wafers 10mm — Dunau Pebble (Dunakavics)

Method Carp

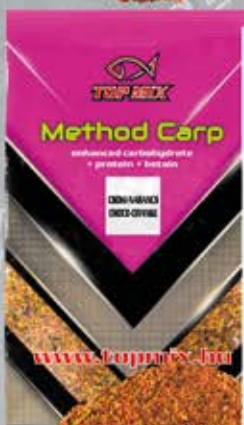

TM125 Method Carp Strawberry Cream

Strawberry is a true classic flavor, which we combined with sweet caramel, making this aroma even more intense and effective. This eye-catching bait mix contains carbohydrates, betaine, and protein, further enhancing its attractiveness to fish. Both the residents of natural waters and fish in heavily stocked commercial lakes are drawn to feeders filled with this bait. Suitable for year-round use.

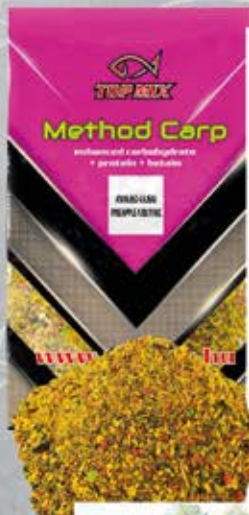

TM126 Method Carp Chocolate-Orange

The chocolate-orange flavor has become one of our best-selling products in recent years, so it couldn't be left out of this range either. The sweet chocolate-orange aroma permeates the bait, making it easy for fish to locate your feeder. Its striking color adds to its appeal. The bait contains carbohydrates, betaine, and protein, increasing its fish-attracting effect even further. In addition to carp, it's also highly effective for crucian carp. Due to its color, it's best suited for warming waters or the summer period.

TM128 Method Carp Pineapple-Butyric Acid

Sweet pineapple and butyric acid — like fire and water. Yet this sweet-acidic contrast has become a favorite among anglers during the summer months. We added vivid particles, blended it with carbohydrates, protein, and betaine, and sealed it until someone opens it by the water. In the summer heat, it's extremely effective for both carp and grass carp.

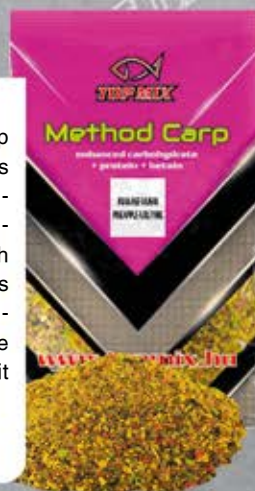

Julianna Csala

TM130 Method Carp Sweet Corn

Sweet corn is almost genetically imprinted in carp — they almost always gladly take baits with this flavor. So, this taste and scent couldn't be missing from this product range. The sweetcorn aroma thoroughly permeates the bait, helping fish quickly find your hookbait, further enhanced by its bright yellow color. Contains carbohydrates, betaine, and protein for added attraction. Also effective for crucian carp alongside carp. Its color makes it best suited for warming or summer waters.

Method Carp Groundbaits

The Method Feeder technique is not only visually exciting but also extremely effective. A few years ago, this method was still considered new in Hungary, yet it quickly became popular among both beginners and advanced anglers. Today, it's widely used by both domestic and international fishermen.

Our company set the goal of fully supporting the Method Feeder technique several years ago. As a result of continuous development, this new-generation groundbait family was born.

The main feature of the Method Carp groundbaits is that fine particles have been replaced with larger grains, and raw ingredients are not used during production. The mix contains many colorful particles that stimulate the curiosity of fish. Thanks to the new production technology and the larger grain size, the mix breaks down very quickly, helping to attract even large-sized fish to your hook. With proper wetting, the bait offers excellent stickiness and breakdown behavior.

The well-balanced nutritional content (carbohydrates, protein, betaine) makes this an attractive food source for carp and other cyprinids in all seasons.

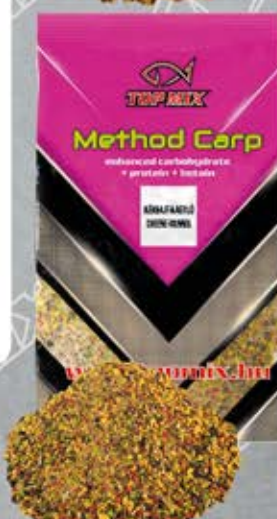

TM127 Method Carp Honey-Tigernut

Honey and tigernut are both favorites among anglers, but based on our experience, their combination performs exceptionally well. It has proven to be a real delicacy when targeting big fish. Along with its aroma, eye-catching colors, and particle size, its nutritional content (carbohydrates, protein, and betaine) further enhances its attraction. A true big fish bait, perfect for both wild waters and intensively stocked lakes!

TM129 Method Carp Headshot (Blue Cheese-Mussel)

With the blue cheese—mussel mix, we've created a new flavor tailored especially for Danube and river fishing enthusiasts. Target species are primarily barbel, chub, and carp, but based on our experience, it can also be successfully used on any wild water or well-stocked commercial lake. This intense cheese aroma mixed with mussel attracts fish from a distance to your feeding spot, where a colorful spread of particles awaits them. Its high carbohydrate, protein, and betaine content keeps fish feeding for a long time. After opening the bag and taking a sniff, it'll be easy to guess where the „Headshot" name comes from!

FEEDER Pro

TM106 Feeder Pro Strawberry Cream

A strongly strawberry-flavored feeder groundbait mix with a special strawberry cream aroma. Its particle size, richness, and content of whole or crushed oily seeds all serve the same goal: keeping carp and crucian carp at your feeding spot as long as possible! Once mixed, its color turns red and intensifies further underwater. Thanks to its high content of sweet and strawberry ingredients, its flavor naturally offers the full taste of real strawberries.

Recommended water temperature: Around 15°C.

TM036 Feeder Pro Lake Balaton

A groundbait specially developed for Balaton anglers, but also an ideal choice for any natural water body. Its formulation is based on several years of Balaton and wild water fishing experience. It typically requires more water for mixing than average groundbaits and additional wetting afterward, as it dries easily. Contains fine clouding particles and larger, bottom-settling grains. Light-colored, creating a strong cloud effect around your feeder or groundbait ball when deployed. Very effective from spring to autumn.

Lajos Sárvári

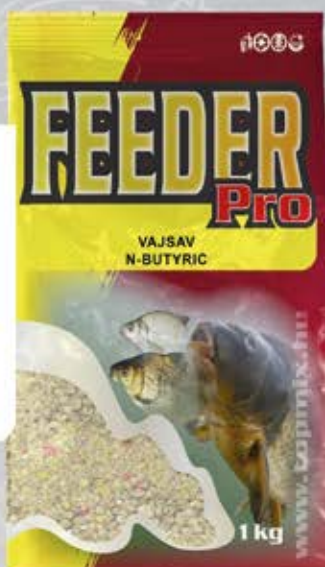

TM037 Feeder Pro Mango

A bright orange-colored, medium-fine particle feeder groundbait with essential mango aroma. Upon hitting the water, it creates an attention-grabbing cloud effect during breakdown, while later-arriving fish can feast on the carob and crushed pellet content. Its ingredients and particle size make it particularly recommended for carp and crucian carp fishing. Most effective in warming or summer conditions, though it has also delivered surprise catches in winter months.

TM068 Feeder Pro Butyric / N-Butyric

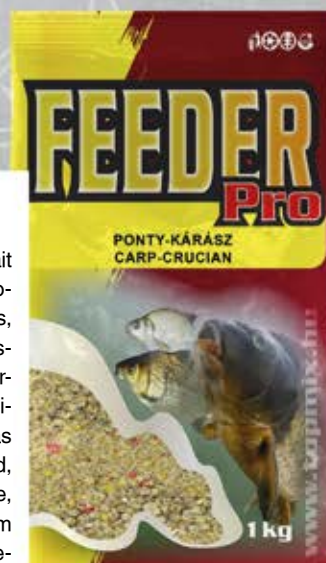

Using butyric acid-based groundbait is essential for anglers from spring through autumn. Made from natural ingredients and free from fishmeal, this white-colored bait creates a strong cloud effect around your feeder or groundbait ball when it breaks down. Recommended for grass carp, carp, and crucian carp during warmer periods.

TM070 Feeder Pro Carp-Crucian Carp

A fruity-style feeder groundbait mix with a special big carp aroma. Its particle size, richness, and inclusion of whole or crushed oily seeds all serve the purpose of keeping carp and crucian carp feeding at your spot as long as possible! Once mixed, its color is light brown to beige, and its sweet taste comes from the high content of sweet ingredients.

Recommended water temperature: Above 15°C.

Richárd Petrovics

TM071 Feeder Pro Cold Water Carp-Crucian Carp

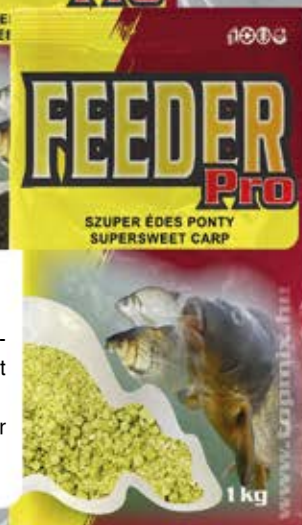

A fruity-style, fine-particle feeder groundbait mix with a special big carp aroma. Its particle size, richness, and whole or crushed oily seeds are all designed to hold carp at your spot for as long as possible! Once mixed, the color turns dark gray to black. Its sweet flavor comes from its large amount of sweet ingredients. Recommended water temperature: Below 15°C.

TM104 Feeder Pro Sweet Corn

TM105 Feeder Pro Sweet Corn Black

These members of the Feeder PRO product line contain 30% extruded soy, so in addition to the high carbohydrate content, they also have a high vegetable protein content. They are used when the target fish is mainly larger carp. The light, yellowish, coarse-grained type is recommended primarily for warmer waters, while the fine-grained black type is recommended for colder waters.

TM069 Feeder Pro Super Sweet Carp FINE

TM072 Feeder Pro Super Sweet Carp

Groundbait mixes with an aroma identical to Italian Panettone cake, developed for competition-level carp and crucian carp fishing. Available in large-particle yellow and fine-particle black variants. Due to their very high super-sweet ingredient content, both are strongly sweet in taste.

The yellow version is best for warmer, summer conditions, while the black FINE version is ideal for cold water or dark-bottom venues. By mixing the two, you can adjust the texture and color to best suit your fishing situation.

Recommended water temperature: Above 15°C, while the FINE version is best for colder waters or dark substrates.

TM073 Feeder Pro Spice Bream

A sweet and spicy competition groundbait, made from 100% natural ingredients, free from artificial flavorings, designed mainly for bream and silver bream feeder fishing. Roasted, ground seeds, gingerbread, high-quality breadcrumbs, and selected spices give it its unique, unmatched aroma and a sweet-spicy flavor. Contains a small amount of floating particles, as bream often feed mid-water. Once mixed, its brown color makes cautious fish more confident to approach. Effective all year round.

FEEDER Pro

CARP NUGGETS

Ernő Kerekes

TM020 Carp Nuggets Lychee
TM024 Carp Nuggets Pineapple
TM025 Carp Nuggets Butyric Acid
TM026 Carp Nuggets Spicy Liver

Carp Nuggets Groundbaits

The most distinctive feature of the Carp Nuggets groundbait range is the extra-coarse particle size. Alongside large-grain cereal derivatives, they contain halibut pellets and the right amount of binding agents.

Primarily recommended for cage feeder fishing, but also perfectly suitable as base feed for float fishing when targeting carp.

The ingredients, flavors, colors, and extra-large particle size of these groundbaits were selected with one goal: to achieve the quickest possible fishing success. Therefore, they contain fast-dissolving particles to ensure immediate attraction. Also included is black halibut pellet, which is an excellent carp bait on its own.

A significant portion contains large-grain fluo red, fluo orange, and fluo yellow sweet, carp-flavored breadcrumb particles, further enhancing visual attraction—even in murky water.

They can be used as base feed, for pre-baiting, in cage and feeder rigs, or mixed with fine-particle groundbaits when specifically targeting big carp. They're also excellent for making stick mixes, or packed into PVA mesh and placed directly next to your hookbait.

Available in four flavor varieties.

István Csike

TM145 CSL Pellet
TM265 Feeding Pellet Strawberry
TM266 Feeding Pellet Honey
TM267 Feeding Pellet Sweet Biscuit
TM268 Feeding Pellet Halibut
TM269 Feeding Pellet Grass Carp

Feeding Pellets

These high-quality pellets are essential for any carp angler's basic groundbait mix. Thanks to their rapid breakdown, they quickly attract fish around the feeding area. During dissolution, they create a long-lasting flavor and scent cloud close to the bottom, drawing fish to the baited area. Available in 6 mm size and 3 kg packs. Perfect for direct feeding, pre-baiting for boilie fishing, or PVA bag use near hookbaits.

Full breakdown time: 30—60 minutes.

CARP LINE

TOP MIX Carp Line Groundbaits

The popular and economical Carp Line groundbaits have proven their effectiveness over many years. This ten-product family covers a wide flavor range, from fruity and sweet to cheesy and fishy. Designed to meet the needs of recreational anglers for targeting everything from carp to bream, including river fish. Suitable for both float and feeder fishing.

Made from high-quality Top Mix ingredients, containing everything needed for successful fishing. These baits stick well and have a medium breakdown time.

DYNAMIC CARP

DYNAMIC CARP

A pellet family designed for Method Feeder fishing, based on extensive experience, made from a complex mix of four types of AQUA pellets and colorful sweet pellets. Rich in fishmeal and protein, with colorful, carbohydrate-rich particles that trigger rapid feeding responses and keep fish feeding longer.

Dynamic Carp offers attractive and balanced carp nutrition, with colorful micro pellets enhancing the mix visually and taste-wise.

Preparation recommendation:

Place the desired amount of pellets in a bait tub, cover with water (and flavor if desired), let soak for 1 minute, drain, mix well, then let sit for 10 minutes until perfect for feeder use.

Suitable for all seasons, effective on commercial lakes and natural waters, targeting primarily carp and crucian carp.

TM206 Silver Carp Feeder Garlic 2500g

TM207 Silver Carp Feeder Milk Cream 2500g

The Silver Carp Tablet is a high-pressure compressed, fine-particle groundbait, creating a slow-dissolving, continuous cloud in the water.

Available in four versions:

Fluo Plankton: Bright yellow, producing fluorescent green color while dissolving.

Fluo Raspberry: Red tablet, creating a fluorescent red cloud.

Milk Cream: The famous and proven „milk powder“ flavor and scent.

Garlic: A favorite among silver carp anglers, enhanced with spirulina (green algae) for extra attraction.

Dissolution time: 35—45 minutes, with continuous release.

Reusable after partial drying.

TM157 TOP MIX Silver Carp Tablet Fluo Raspberry

TM158 TOP MIX Silver Carp Tablet Fluo Plankton

TM159 TOP MIX Silver Carp Tablet Garlic

TM161 TOP MIX Silver Carp Tablet Milk Cream

Silver carp fishing is becoming increasingly popular thanks to their large size, providing anglers with a real challenge and memorable fishing experience. The key to success lies in preparing the right groundbait, which must imitate a plankton cloud to attract and trigger the feeding response of silver carp.

Developing the perfect bait was a real challenge for us—we didn't want to copy existing products. Twice I traveled to China, the fish's homeland, where silver carp fishing is the most advanced in the world. Through my contacts, I spoke with many silver carp anglers and visited several bait factories, returning home with exact percentage-based recipes. The ingredients used there are significantly different from those used in Europe, but of similar quality and now available here too. Using this knowledge, we created our silver carp groundbaits.

BUSSA SILVER CARP

BUSA Bottom Groundbaits

Also plankton-imitating, moldable into feeders, just like the floating versions. After mixing with water or milk, fill your feeder and cast. They create a dense, attractive cloud, and the 800g variants produce fluorescent color clouds.

Their special feature: while they work upward visually, the core remains intact for a long time, making it ideal for short hooklength presentations.

TM167 Silver Carp Floating Fluo Raspberry 800g

TM168 Silver Carp Floating Fluo Plankton 800g

TM177 Silver Carp Floating Garlic 2500g

TM178 Silver Carp Floating Milk Cream 2500g

CHINESE METHOD

Silver Carp Floats

Designed for feeder-based silver carp float fishing. The 50g and 60g floats can easily carry the heavy bait balls formed inside the feeder.

TM758 Silver Carp Float 50g
TM759 Silver Carp Float 60g

China is the native homeland of the silver carp. Over time, numerous fishing techniques have been developed there for catching them with a hook. Some of these methods are not compatible with European fishing regulations—for example, the use of more than two hooks—but there are many techniques that are fully legal and highly effective here as well. This is particularly interesting because silver carp are excellent sport fish, and hooking and fighting a larger specimen can provide a true angling experience. Not to mention that some individuals can exceed 60 kg in weight. Their popularity is growing rapidly in our country too, and several methods now deliver excellent results. Through our strong connections, we explored their homeland, learning from local anglers and their experience. Now, you too can gain access to the essential tackle of their most popular method, pole fishing, including rods with the right strength, landing nets, groundbaits made by us based on their original recipes, special silver carp hooks, and floats.

Silver Carp Floating Groundbaits for Pole Rods

Plankton-imitating groundbaits, moldable onto the hook or into a small feeder above the hook. Just mix with water or milk, fill the feeder, and fish.

Available in 450g and 500g packs, as Original Chinese or Chinese Method (locally produced by Top Mix following the original recipe).

TM174 Original Chinese
TM176 Chinese Method

HD2050 Silver Carp Leader with Feeder Basket

Special pre-tied silver carp rig with two hooks and a small feeder basket above the top hook. One hook should sit about 5 cm below the other. The bait is placed into the basket above the upper hook, ensuring that falling particles attract fish to both hooks. The distance between the hooks and the feeder is adjustable.

TM738 Silver Carp Feeder Tree (Busafa)

Designed for silver carp float fishing with tablets. Use it with groundbait only, with both bait and tablet, or even with two tablets (removing the basket from the shaft). The „cross“ is made from aluminum, while the shaft and basket are steel. Length: 20 cm

TM739 Silver Carp Feeder

A simple, budget-friendly feeder for silver carp float and tablet fishing. Use it with groundbait only, or remove the basket for tablet-only setups. Made from steel. Length: 13 cm

SILVER CARP

HD2051 Floating Busa Feeder

This is a specialized rig for bighead carp (busa), suitable for both bottom fishing and float fishing methods. The lead weight on the line allows you to adjust the height of the feeder basket and, consequently, the hooks, relative to the bottom. The lead also serves to anchor the rig. You can attach either a feeder rig or a float rig to the end of the main line. The feeder basket opens up for easy filling. This design offers a bait-saving solution. The rig includes two hooks, and their leader lengths are also adjustable.

NEW
TOP MIX
POLE

HD2052 Hanging Float Stopper/Connector

This is a connector element designed for Chinese bighead carp (busa) floats. To use it, you insert the end of your float into the hole of the silicone-rubber connector. This will securely fasten the float. You then thread your fishing line through the hole of the built-in wear-resistant (yellow) insert. This design allows the float to slide easily on the line. Each pack contains 6 pieces of these connectors.

Lead Coil

Special flat lead coil for float weighting. Features a central hole for threading the line. Cut off the necessary amount from the coil to balance your float correctly. Each marking on the lead indicates 0.1g.

- HD2053 Lead Coil 3g
- HD2054 Lead Coil 4g
- HD2055 Lead Coil 5g
- HD2056 Lead Coil 6g

HANDING előkötött spiccbotos busa horgok

Specially developed pre-tied, super-strong and sharp silver carp hooks with UV-glue and reinforced whipping. Each leader features 2 hooks, with one placed about 5 cm lower than the other. The feeder basket sits above the top hook, ensuring falling particles attract fish to both hooks.

Code	Name	Hook Size	Line Diameter
HD2068	Hanging Silver Carp Leader	4	0,28mm
HD2069	Hanging Silver Carp Leader	4	0,32mm
HD2070	Hanging Silver Carp Leader	3	0,28mm
HD2071	Hanging Silver Carp Leader	3	0,32mm

HANDING

HANDING LWG RUBBER-COATED BIG FISH LANDING NET

High-quality, heavy-duty, rubber-coated deep net head, size 50 x 60 cm, capable of lifting up to 80 kg of fish.

LWGCW03 HANDING TELESCOPIC BIG FISH LANDING NET HANDLE

High-end telescopic landing net handle, made from multi-layered 40T carbon, adjustable length, total length 4 meters.

The famous rods featured in Chinese rod demo videos—rods that won't break even under massive fish loads.

Following an agreement with one of China's top rod manufacturers, we were the first to introduce these rods to Hungary. They were displayed at the Ponty Show exhibition, where visitors could test the entire range, lifting enormous weights.

In China, pole fishing is the most popular method, as observed during a 2004 international tournament visit. These rods were used to land huge silver carp and black grass carp.

The rods are made with Toray Japanese carbon fabrics, bonded with Toray resins, manufactured to the same standards as aerospace components—making them lightweight, flexible, and incredibly strong.

The internal layer structure is precision-engineered, as visible in the diagrams.

The table shows lifting capacity (fish pulling weight) for each rod model.

However, like any rod, they can break if abused. For landing large fish, always use a long-handled landing net or get help from a fellow angler.

DUPLEX WAFTERS

Based on our competition experience, we placed great emphasis on colors, color combinations, and flavor harmony when developing the Duplex Wafers hookbaits. Besides color, the balance and buoyancy of the bait are critically important for success. In this range, buoyancy has been precisely calibrated.

They are available in the three most commonly used sizes, in 30g jars with airtight lids to prevent drying out.

OOZING WAFTERS

A favorite among Method Feeder anglers, the Oozing Wafers, also called „bleeding“, „leaking“, or „color-cloud baits“, continuously release color and aroma clouds upon contact with water, attracting nearby fish.

We are pleased to now offer high-quality, generously sized Oozing hookbaits in our range. These baits can be used multiple times—after catching a fish, there's no need to replace the hookbait.

We strived for the best flavors and color combinations. Each tub contains a mixed size selection (8x6mm and 8x8mm).

MEGA Method Hook Pellets

Specially developed floating pellets for method feeder fishing. These pellets are a larger, more selective version of smaller Method Pellets. Their effectiveness is enhanced by their color, flavor, and the fine particles that dissolve very slowly from them. The pellets contain high nutritional ingredients such as LT fishmeal, with a strong scent and flavor that further boosts their fish-attracting effect. Ideally, you can catch multiple fish on a single pellet. Recommended presentation method: mount them on a bait spike tied to a hair rig or use a silicone ring.

MagicCorn

The TOP MIX MagicCorn is an artificial corn imitation (rubber corn) designed to be irresistible for fish when presented correctly. It looks deceptively similar to real canned sweetcorn, has excellent buoyancy, and a strong, intense flavor. Its unique taste and aroma set it apart, and it comes in a practical jar with a small scoop for easy use. Each jar contains 3x25 pieces of different-sized corn grains: Medium (M) — similar to standard canned corn size, Large (L) — for targeting bigger fish, and Small (S) — competition size, perfect when you just want bites regardless of fish size. For larger bait presentation, two grains can be mounted on the right-sized bait spike.

3 különböző méret 1 csomagban!

The Aqua-Garant pellets are manufactured by the Austrian company Garant Tiernahrung for the Central and Eastern European markets. Using the most modern technology and the highest quality raw materials, with an in-house laboratory and ISO and HACCP certifications, they guarantee GMO-free, high-quality fish feed for various fish species.

AQUA DYNAMIC Trout Pellet
A strongly fishmeal-based, oily professional competition pellet from Aqua Garant. Perfect for method feeders and PVA bags.
Available sizes: 2 - 4 - 6 mm
Packaging: 800g and 25kg bags.

AQUA UNI Trout Pellet

The most successful Aqua Garant pellet among anglers and competition anglers. Known for its strong fishy smell, high nutritional value, and excellent dissolution. Can be pre-soaked and used directly in method feeders.
Available sizes: 2 - 4 - 6 mm
Packaging: 800g and 25kg bags.

AQUA CLASSIC Carp Pellet

The most well-known Aqua Garant pellet among anglers. Its composition is already very attractive to fish and is also excellent for flavor enhancement.
Available sizes: 2 - 4 - 6 - 8 mm
Packaging: 800g and 25kg bags.

AQUA START

The 1.5 mm AQUA START pellet is Aqua Garant's highest quality pellet, originally developed for fish farms, where juvenile fish require the best quality nutrition. In fishing, it shows its true effectiveness under competition conditions. It has extremely high nutritional values, enhanced with some attractors to stimulate even more intense feeding activity.

AQUA VITAL SWIM

A premium quality, extruded floating pellet made with fishmeal. Designed for surface fishing of carp species.
Available size: 6 mm
Packaging: 800g and 25kg bags.

AQUA Catch Drilled Pellet

Perfect for hook baiting but also suitable for feeding. It has a strong fishy smell, oily texture, and works equally well for carp and catfish.
Available size: 20 mm drilled
Packaging: 800g and 25kg bags.

AQUA MIX CUD 2

A carefully balanced blend of Aqua Classic, Aqua Uni, and Aqua Dynamic 2mm pellets, specifically designed for carp fishing. It can be used directly for feeding, ground for method fishing, made into paste (dough bait), or soaked and used in a method feeder.

AQUA MIX4 CUD 4

A carefully balanced blend of Aqua Classic, Aqua Uni, and Aqua Dynamic 4mm pellets, tailored for carp fishing. Suitable for direct feeding, ground for method fishing, made into paste, or soaked for method feeder use.

AQUA MIX CU 2

A 2mm pellet mix made from Aqua Classic and Aqua Uni pellets in the ideal ratio for carp fishing. Suitable for direct feeding, ground for method fishing, paste making, or soaked for method feeder use.

AQUA CLASSIC Red 2 AQUA CLASSIC Red 4

AQUA CLASSIC Red pellets, available in 2mm and 4mm sizes, made using a special in-mass coloring process. Perfect for feeding and for creating colorful attraction zones in your swim.

AQUA MIX CU 4

A 4mm pellet mix made from Aqua Classic and Aqua Uni pellets in the right ratio for carp fishing. Can be used directly for feeding, ground for method fishing, made into paste, or soaked for method feeder fishing.

János Petrovics

AQUA Crushed Uni

The crushed version of the most successful Aqua Garant pellet among anglers and competition anglers. Strong fishy smell, high nutritional value, and excellent solubility characterize this pellet. After proper moistening, it can be used directly in a method feeder and is perfect for coating pellets.

AQUA Crushed Classic

The crushed version of the most well-known Aqua Garant pellet among anglers. Its composition is already very attractive to fish and it can be further enhanced with flavors. After moistening, it's ready to use in a method feeder and perfect for pellet coating as well.

AQUA Crushed Red

Crushed Aqua Garant RED pellet. Made from specially in-mass colored Aqua Garant pellets using a unique process. Can be used on its own or mixed with pellets according to the season and water conditions. Also ideal as an additive for carbohydrate-rich groundbaits, or for "capping" and "coating" pellets.

AQUA Betain Complex

A special additive-rich mix made from the popular Aqua pellets, containing not only their naturally high protein content but also a sufficient amount of betaine and color pigments. Betaine is a natural appetite stimulant widely used to increase feeding response.

Fish primarily rely on their sense of smell for food detection, stimulated by water-soluble amino acids and betaine. Betaine triggers a strong feeding response, which is why it's commonly used in the feeding of intensively farmed fish. When entering the water, it creates a highly visible cloud that attracts fish even during descent. The Aqua Betain Complex is available in five colors, each chosen to stand out well against the lakebed.

In competition scenarios, when bites decrease, changing to a new color shade can reignite the fish's interest. This product range was designed exactly for such situations.

Rigó Edit

TM554 AQUA Betain Complex Orange

TM560 AQUA Betain Complex White

TM561 AQUA Betain Complex Yellow

TM562 AQUA Betain Complex Red

TM563 AQUA Betain Complex Green

Aqua Wafers

AQUA pellets and their ground forms are among the most essential feed materials for method feeder anglers. To complement them, we created these unique wafers for feeder anglers who prefer highly attractive, dissolving hookbaits. These are lightened pellets but only to the extent that even the smallest 8 mm versions can be used with fine bait spikes and #14 hooks. Made from a blend of Aqua Classic and Classic-Uni pellets, these wafers boast a high protein content (37-45%). Both variants are available in 8, 10, and 12 mm sizes. Their solubility is intense, making them true „open baits“ that release attractants around the feeder quickly.

TM564 Aqua Wafers Classic 8mm

TM565 Aqua Wafers Classic 10mm

TM566 Aqua Wafers Classic 12mm

TM576 Aqua Wafers Classic-Uni 8mm

TM577 Aqua Wafers Classic-Uni 10mm

TM578 Aqua Wafers Classic-Uni 12mm

Aqua Boilie

High-quality boilies made from AQUA GARANT pellet ground meal using a special process. These are open, dissolving boilies with a remarkable 37% protein content and a balanced protein-to-carbohydrate ratio. A real carp delicacy! When designing these, digestibility and fish welfare were key alongside attraction, so no artificial flavors, preservatives, or additives were used. Dissolution time is 4—6 hours, but visible particle breakdown begins within the first minute, quickly unleashing attractants.

TM527 Aqua Boilie 20mm

TM528 Aqua Boilie 24mm

ALLSORTS TOURNAMENT WAFTERS

Allsorts TOURNAMENT Wafers

Top Mix Allsorts Tournament Wafers are dissolving pellets based on many years of competition experience, combining the most frequently used colors in one jar. The mix includes white, lemon yellow, orange, and pink wafers, all in dumbbell shape and 8, 10, and 12 mm sizes. With a sweet white chocolate aroma, these wafers have proven effective in all seasons. Their buoyancy is very low, making them suitable even with light and small hooks and fine bait spikes.

Specifically developed for competition anglers, but thanks to their compact packaging and effectiveness, they're also an excellent choice for hobby anglers.

TM328 Allsorts Tournament Wafers 8 mm

TM329 Allsorts Tournament Wafers 10 mm

TM330 Allsorts Tournament Wafers 12 mm

AQUA Nitro Boost Gel

A thick aroma gel specially developed for method feeder fishing, particularly for Aqua Garant pellets, but it also works great with light rigs or open-end feeders. Its uses are endless—it can flavor and color sweetcorn, maggots, or even supercharge PVA bags. The dense gel spreads horizontally on the lakebed, creating a strong smoky effect that stays concentrated around your feeder, resisting dispersal by flowing water. Its intense aromas attract nearby fish quickly, encouraging faster bites. PVA friendly!

TM109 AQUA Nitro Boost Gel Pineapple

TM110 AQUA Nitro Boost Gel Garlic-Liver

TM111 AQUA Nitro Boost Gel Krill-Mussel

TM112 AQUA Nitro Boost Gel Strawberry Cream

TM113 AQUA Nitro Boost Gel GLM

TM115 AQUA Nitro Boost Gel Sweet Mango

TM116 AQUA Nitro Boost Gel Durian-Squid

AQUA Method Spray

A concentrated aroma spray designed for quick external flavoring and coloring of hookbaits, feeder pellets, and groundbaits. The effect can be explosive! Primarily developed for AQUA pellets and method groundbaits made with them, but equally effective with other feeds and pellets.

TM472 Pineapple-Butyric

TM473 Strawberry Cream

TM475 Garlic-Liver

TM476 Krill-Mussel

TM477 Panettone

AQUA Method Crumb

In method fishing, there are times when changing the pellet mix can trigger more bites or increase activity, especially when matching the hookbait color to your feed. In such situations, adding a little Method Crumb to your pellet mix can help. A few contrasting, standout particles among the feeder pellets can attract fish curiosity. Once fish start seeking out these colors and your hookbait matches the crumb color, bites will come faster.

TM216 AQUA Method Crumb Fluoro Orange

TM217 AQUA Method Crumb Fluoro Yellow

TM218 AQUA Method Crumb Fluoro Red

AQUAroma Booster for Aqua Pellets

A special flavoring concentrate designed primarily for AQUA pellets. Test results show one bottle is enough to flavor approximately 400g of pellets or pellet mix. Easy to use: simply pour over your pellets, wait 15–20 minutes, then load them into your feeder. For optimal soaking and separation, we recommend adding the booster in two stages.

TM435 Strawberry Cream

TM436 Mango

TM437 Chocolate-Orange

TM438 Pineapple

TM439 Garlic-Liver

TM456 Sweetcorn

TM458 Cheese

AQUA CSL Booster

A special CSL (Corn Steep Liquor) aroma blend developed primarily for AQUA pellets. This CSL Booster contains a low percentage of alcohol, which makes it extremely effective even in cold water. Thanks to its high protein and energy content, carp are especially attracted to it. The Garlic version creates a fluoro green cloud, Strawberry Cream forms a fluoro red cloud, while the others produce a natural brown cloud around your feeder.

TM450 AQUA CSL Booster Sweet Mango

TM451 AQUA CSL Booster Squid

TM452 AQUA CSL Booster Natural

TM453 AQUA CSL Booster Liver

TM455 AQUA CSL Booster Garlic

TM457 AQUA CSL Booster Strawberry Cream

Top Mix Pre-Digested Particles are prepared using a pre-digestion process well known in animal nutrition, including fish feeding. One such method involves treating cooked particles with digestive enzymes—a technique that, while relatively simple to perform, demands extensive experience and expertise. The feeding attraction of these particles is unquestionable. Once prepared and vacuum-packed with protective food-grade gas, they retain freshness and attractant effect for a very long time without preservatives.

Pre-digested particles do not fill the fish quickly, ensuring fast metabolism and causing fish to return repeatedly to the baited area. The range includes single grains like corn and wheat, as well as special carp and grass carp blends supplemented with other seeds.

PRE DIGESTED

TM584 Pre-Digested Corn

TM585 Pre-Digested Wheat

TM586 Pre-Digested Carp Mix

TM587 Pre-Digested Grass Carp Mix

TM592 Pre-Digested Corn-Hemp

TM499 Feeder MAG-MIX

Primarily developed for long hook-length feeder fishing but suitable for other methods as well. Feeder Mag-Mix is a moist blend of chopped seeds. Before use, break it apart by hand until it falls into loose particles. It can then be loaded directly into the feeder. Its effectiveness can be further enhanced by mixing in 2-4 mm pellets. When you need to deliver a large amount of particles with a feeder, this is the best choice. It can also be mixed with groundbait or used on its own.

Corn TURMIX

A flavored, colored, and pureed mix made from 80% crushed corn, 10% wheat, and 10% rapeseed. For carp fishing, anglers often use pureed seed versions, especially corn, but preparing this can be time-consuming and complicated. With this product, there's no need to go through the lengthy and tricky preparation process yourself—everything comes ready in a single product. Perfect results can be achieved by mixing the Corn Turmix with dry groundbait.

TM490 Corn Turmix Natural

TM491 Corn Turmix Honey

TM492 Corn Turmix Strawberry

TM493 Corn Turmix Big Carp

TM494 Corn Turmix Butyric Acid

TM196 Top Mix Sweetener

Sweetening groundbait is a common practice. This sweetener adds no extra scent or aroma but gives a level of sweetness unmatched by any other additive! Dosage is a matter of preference, but it is especially effective in warming or cooling waters. The jar contains enough for sweetening 100 kg of groundbait.

TM194 Top Mix Groundbait Colorant Black

A coloring agent for groundbait and hookbaits. Highly pigmented, so only small quantities are needed. It must be mixed with dry materials. With careful dosing, you can achieve anything from light gray shades to deep black. The jar is enough to color 60 kg of groundbait completely black.

Pastoncino

TOP MIX Pastoncino is a special additive—a mix of oily, sinking, lemon-flavored, sweet, medium-sized „heavy crumb” and Niger seed. The emphasis is on the extremely intense lemon aroma, especially effective in warm summer waters. The brightly colored (red or yellow) particles in the breaking groundbait are eagerly eaten by fish, keeping them in the fishing area longer. In its homeland, Italy, it's an essential component of crucian and carp mixes. In Hungary, it's also indispensable for good bream mixes. Yellow is recommended for murky waters, red for clear waters.

TM222 Pastoncino Red
TM223 Pastoncino Yellow

English Crumb

High-quality sinking crumb from Italy in red and yellow colors. All fish species like it and readily pick it out from other groundbait particles. Recommended to add 2-10% to any groundbait.

TM201 English Crumb Red
TM202 English Crumb Yellow
TM205 English Crumb Red-Yellow Mix

TM102 Cold-Pressed Corn Germ Pellet

TM210 Tourteau de Mais

TM208 Ground Tourteau de Mais

TOP MIX Tourteau de Mais is an extra-quality, large-grain, high-oil corn cake made in Italy. It's prepared by soaking, optionally mixing with flavors, and then adding to groundbait. Usage: soak at least half an hour before fishing, typically mix one bag with 2 liters of water and optional flavoring, then gradually blend it into 4-5 kg of dry groundbait. Recommended for all fish species, but especially bream, carp, and crucian carp. The ground version soaks much faster, making it usable sooner than the coarse version. The Tourteau de Mais pellet form can be used directly for feeding.

FLUO Crumbs

These special and unique additives are fluorescent-colored crumbs. Thanks to their extremely vivid colors and very sweet taste, they provide excellent attractant effect. Even in murky, dark waters, the particles remain visible, enhancing the flavor impact with visual stimulation. Tests clearly showed that despite their striking colors, they do not scare the fish but instead arouse their curiosity, increasing the effectiveness of your groundbait mix. They are also ideal for river fishing.

FLUO

TM224 Fluo Crumb Yellow
TM225 Fluo Crumb Orange
TM226 Fluo Crumb Red
TM227 Fluo Crumb Green
TM228 Fluo Crumb Mixed

TM230 Cheese Meal

100% dried Parmesan cheese powder. An excellent additive for barbel groundbaits. When mixed with soaked bread, it creates a real barbel delicacy. Boilie anglers also use cheese during warm summer periods, so it's worth spicing up carp groundbaits with a little cheese. Recommended dosage: 5-30%.

Dezső Nagy (Zsóde)

TM235 Terre de Somme

TM233 Terre de Somme - Black

Dark brown, oily, slow-dissolving, heavy clay, suitable for bottom and river fishing. Usage: mix with groundbait at 5-50%, also ideal for introducing bloodworms into the water. The two clay types can be blended to create a custom texture.

TM234 Terre de riviere - Black

TM236 Terre de riviere

This is a dark brown, rich, slow-dissolving, and dense clay, ideal for both still bottom and flowing water fishing applications. It's recommended to mix 5-50% with your chosen groundbaits, and it's also excellent for delivering mosquito larvae into the water column. By combining the two available clays, you can achieve any desired consistency.

TM238 Washed Gravel, 1,6 - 3 mm

Uniform grain size, thoroughly water-washed gravel. Ideal for adding weight to groundbait, maggots, or seed mixtures.

TM280 TOP GUM Maggot Glue, 200g

100% Arabic gum imported from Saudi Arabia. The best maggot adhesive available. Thanks to its strong bonding power, only a small amount is needed. Dissolves quickly in water. This was the glue used by Alan Scotthorne and the England team at the 2005 European Championship.

TM212 PV 1 Collant

A high-nutrition groundbait binder imported from Belgium. Recommended usage rate: 5-20%. Use higher doses for river fishing. Suitable species: carp, bream, dace, barbel.

TM215 Fish Meal

High-quality North Sea fish meal made from marine fish. Due to its high nutritional value, it can be mixed into almost all carp groundbaits, especially effective in warm water conditions.

TM237 Bloodworm Separator Powder

A dry, very finely ground, dark brown loess powder. Excellent for separating bloodworms. Simply sprinkle a small amount onto the worms and mix gently. If the worms are fresh enough, it will separate them into strands and keep them alive for a long time as this is a completely natural material. Also ideal for drying over-wetted loess. 250g.

Groundbait and Seed Binders

A corn-based binder for gluing groundbait and particles, available in multiple flavors. It can bind almost anything to anything! For example: maggots can be glued together with corn and gravel. Recommended to mix into groundbait while still dry.

TM270 Natural
TM272 Vanilla
TM273 Honey
TM274 Strawberry

TM978 Top Mix D36 Feeder Box

A lightweight, practical, space-saving fishing seatbox.

- Solid, stable, welded aluminum frame: tested up to 130 kg — didn't budge!
- Handy storage compartments: side drawer, shallow 40mm storage under the seat, and a deep 130mm lower tray that holds all your tackle.
- Comfortable (42 x 30 cm) seat surface because fishing is not just a sport but also relaxation!
- D36 legs for maximum stability.
- Padded shoulder strap for easy carrying.
- Total weight: only 7 kg!
- Dimensions: 64 x 42 x 50 cm (adjustable).

TOP MIX Stradivari Carp 360 Landing Net Handle

Take-apart system, strong, carp-oriented, yet slim landing net handle. The middle section also features a threaded end, making it usable as a shorter, extra-strong big fish landing handle too. Adjustable to 210 cm, 280 cm, or 360 cm, making it suitable for almost any fishing situation.

TOP MIX Stradivari Landing Net Handles

Take-apart system, strong yet extremely slim and easy-to-handle landing net handles available in 2m, 3m, and 4m painted sections. Suitable for fast small fish fishing or landing 2-3 kg carp.

TOP MIX Feeder Rod Rest

Versatile, rubber-coated rod rests for securely holding feeder and match rods in any situation.

TORAYCA

Stradivari TOURNAMENT

HIGH-PERFORMANCE CARBON FIBER

TORAYCA

Stradivari Tournament

The new Stradivari Tournament feeder rod series was designed by József Papp, three-time World Champion with the Hungarian national team and four-time Hungarian Champion, who also created the legendary Stradivari rods nearly 20 years ago.

These rods are recommended primarily for experienced and professional feeder anglers, especially for long hooklength fishing and delicate method feeder techniques. Every rod in the series performs exceptionally, whether used for sensitive pleasure fishing or at top-level competitions. These are the rods that will surely catch attention on the bank, providing a fighting experience only few feeder rods can offer.

What does this rod offer?

The slimmest rod blanks ever on the market, combined with extraordinary speed and unmatched flexibility, resulting in a perfectly balanced feeder rod action. This performance is achieved thanks to the use of Japanese TORAY carbon material.

The thin, elegant blank is equipped with ultra-lightweight, durable, and stylish American Guide rings. The tip rings are three-legged, reducing line twist risk and preventing deformation or breakage inside the rod tube.

The handle features a cork-EVA ergonomic grip, preventing the rod from slipping even on steep rod rests. The seamless reel seat is made by the Japanese company FUJI. Each rod comes with three different strength quiver tips (0.75 - 1.0 - 1.5 oz), all in a highly visible white color that won't fade and remains easily visible in any light condition. The tip strength is marked in gold on every tip.

The rods come in a high-quality burgundy-colored rod bag with an external pocket for the tips.

Code	Length	Casting Weight	Diameter	Weight	Tips	Transport Length
TM610	3.30 m	30 g	9.5 mm	195 g	0,75-1-1,5 oz	115 cm

Stradivari Method Feeder

These rods are made from high-quality 30T carbon. Thanks to the material's excellent properties, the rods are light, stiff, and highly manageable. Special attention was paid during design to ensure enjoyable fishing with minimal chance of losing fish. Even the shorter models have enough backbone to handle fish during the fight. This stiffness allows precise and long-distance casting with longer versions, while still delivering an enjoyable fight experience. They rank among the lightest in their category, making them comfortable for prolonged sessions. The finer 3.30m and 3.60m rods feature single-leg, raised SeaGuide rings, while the stronger 3.90m and 4.20m models come with double-leg high-quality SeaGuide rings. The blank surface is raw carbon with glossy lacquer accents under the inscriptions. The handle length is optimized for rod control, and its EVA and cork combination provides a comfortable grip. The end of the handle is finished with hard cork, and a hook keeper is also installed on the rod.

The tips are equipped with triple-leg tip rings to prevent bending and reduce line wrap during casting, lowering the risk of tip breakage.

Code	Length	Sections	Casting Weight	Weight	Tips	Transport Length
TM650	3.30	3+3	60 g	180 g	1-2-3 oz	117 cm
TM651	3.60	3+3	70 g	216 g	1-2-3 oz	127 cm

DISTANCE FEEDER

3.90 / 4.20

HIGH-PERFORMANCE CARBON FIBER

TORAYCA

DISTANCE Feeder Rods

Specifically designed for long-distance feeder fishing, available in 3.90m and 4.20m lengths.

Built from top-quality TORAY carbon blanks, featuring SEAGUIDE rings optimized for distance casting, and handle lengths tailored for maximum casting leverage. Under skilled hands, distances of 150-170 meters can be achieved with the 4.20m version, while 120-140 meters are possible with the 3.90m model.

If you're aiming for distance feeder competitions, this 4.20m rod should be on your shortlist—as proven by the 207m cast achieved during the 2022 Long Distance Feeder Championship!

Perfect for hobby or competitive anglers wanting to fish over 100 meters. The rods underwent a long testing phase before release, with prototypes already used by the Top Mix team at the 2021 and 2022 Method Team Championships at the Maconka Reservoir, securing podium finishes both years.

These Distance Feeder rods are stiff, powerful, yet slimmer than similar models.

EVERY DISTANCE FEEDER ROD COMES WITH A FREE CARBON TIP HOLDER!!

Code	Length	Sections	Casting Weight	Weight	Tips	Transport Length
TM626	3.90 m	3+3	60-120 g	360 g	3-4-5 oz	135 cm
TM627	4.20 m	3+3	60-140 g	450 g	3-4-5 oz	145 cm

T-REX

METHOD FEEDER

Reel

T-Rex Method Feeder

Made from high-quality 24T carbon, these rods are light, stiff, well-loadable, and extremely responsive.

Their design ensures fishing remains enjoyable while minimizing fish loss.

Thanks to their perfectly tuned action, these rods allow precise targeting of desired distances with ease, even when fishing with small hooks and fine leaders.

Among the lightest in their class, making them comfortable for long sessions.

The rods are fitted with double-leg, high-quality SeaGuide rings, meeting today's standards.

The surface is matte black lacquered.

The handle length is optimized for casting comfort, and the EVA and cork combination provides a pleasant grip. The handle ends with hard cork, and a hook keeper is fitted on the blank above the handle.

The tips come with triple-leg tip rings to prevent bending and reduce line wrap during casting, lowering the chance of breakage.

The T-Rex Method Feeder rod family comes in 3.60m, 3.90m, and 4.20m lengths, offering perfect solutions for most fishing situations.

Code	Length	Sections	Casting Weight	Weight	Tips	Transport Length
TM602	3.60M	3+3	80 g	235 g	1,5-2-3 oz	125 cm
TM603	3.60MH	3+3	100 g	240 g	1,5-2-3 oz	125 cm

TM606	3.90XH	3+3	150 g	286 g	2,5-3,5-4,5 oz	135 cm
TM610	4.20H	3+3	120 g	310 g	2-3-4 oz	146 cm

T-REX RIVER FEEDER

T-Rex River Feeder

The T-Rex River Feeder rod series is made using 24T Carbon material. Thanks to this high-quality material, the rods are exceptionally strong, lightweight, flexible, and highly load-bearing. It's safe to say that under normal use, these rods are virtually unbreakable! The perfectly tuned action allows anglers to target the desired distance easily and accurately, with minimal risk of losing fish, even when using small hooks and thin leaders.

The rods feature a high-end, sufficiently long handle made from a combination of high-quality cork and EVA, providing a very comfortable grip. A strong reel seat ensures secure reel placement. The rods are equipped with double-leg, high-quality SeaGuide guides, meeting today's standards. Additionally, a hook keeper ring is installed above the handle on the rod blank.

Although these rods are not specifically designed for distance casting, an official measurement at the Long Distance Championship (Távdobó OB) showed a cast of 165 meters with the 4.20m version. Each rod comes with three interchangeable tips of different strengths: 2, 3, and 4 oz.

Code	Length	Sections	Casting Weight	Weight	Tips	Transport Length
TM608	3.90HH	3+3	300 g	335 g	2-3-4 oz	135 cm
TM609	4.20HH	3+3	300 g	370 g	2-3-4 oz	146 cm

ASTERX METHOD FEEDER

AsterX method feeder

In 2023, we aimed not only to please competitive anglers with a new feeder rod family but also to think about general carp anglers. Within this, the AsterX Method Feeder rod series was developed for anglers who appreciate detecting sensitive bites and playing fish with a slim, flexible rod. All this with quality equipment at an affordable price! The AsterX rod series offers unbeatable weight and slimness in its price range. At the same time, it maintains the stiffness needed for accurate casting, avoiding a sluggish feel, while still being flexible enough to absorb sudden runs during the fight.

Just like the Tournament series, the AsterX rods are fitted with lightweight American Guide rings, and of course, the tip rings come with reinforced feet.

Code	Length	Casting Weight	Diameter	Weight	Tips	Transport Length

TM696	3.60 m	80 g	12.2 mm	210 g	1-2-3 oz	126 cm
TM697	3.90 m	100 g	12.5 mm	250 g	1-2-3 oz	136 cm

STRADIVARI

SPIN I II III

TOP MIX

Spin I-II-III

You will feel the secret of the Stradivari spinning rods the moment you pick them up! These rods belong to the premium category, where quality and performance know no limits. The Stradivari Spin spinning rod series consists of three types: L, ML, and M. Each model has its own unique character, and its type identifier is clearly visible on the handle section. The new Stradivari Spin rods are made from 30T and 40T TORAY Carbon, featuring an elegant raw carbon finish and fast action. They are lightweight, flexible, powerful, and highly sensitive. The lightweight "Fuji Alconite" K-series guide set offers high abrasion resistance and perfect line flow, ensuring maximum casting distance! The reel seat is also from FUJI!

In skilled hands, this rod plays like a fine musical instrument.

To complement our high-quality STRADIVARI spinning rods, we have created a selective range of lures that our spinning test anglers found the most effective. The range includes nine types of baitfish imitations (76mm and 100mm sizes) and three types of worm/grub imitations (60mm size).

These lures are made from the finest materials to ensure maximum attractiveness: they are soft, durable, and perfectly realistic in imitating the movement of the prey fish. Their AminoX flavoring further enhances their effectiveness. They are suitable for practically all soft lure fishing techniques like jigging, offset rig, dropshot, etc.

ARROW PRO Method Feeder Cage

The ARROW PRO method feeder cage features longitudinal ribs that excellently hold the groundbait, provide ideal positioning for the hookbait, and reduce the risk of hook tangling. The forward-shifted center of gravity, the shape of the weight, and the overall design make it the most streamlined feeder cage we have produced so far.

The longer stem and the guiding fin on the stem ensure excellent flight characteristics, allowing long and accurate casts with the method feeder cage. Thanks to its design, the splash sound upon water impact is also reduced. Small gripping knobs on the bottom of the feeder provide excellent bottom grip, preventing the feeder from sliding away from the feeding area, even when the line is under tension. According to angler needs, the method cages can be removed or swapped from the line instantly without dismantling the rig. This offers great flexibility for transport and allows quick change between different feeder weights. For manufacturing the top part of the feeder cage (the bait holder section), we used 50% recycled fluoroclear material.

TM764 — ARROW PRO Method feeder cage 30g

TM765 — ARROW PRO Method feeder cage 40g

TM766 — ARROW PRO Method feeder cage 50g

TM767 — ARROW PRO Method feeder cage 70g

ARROW PRO XL Method Feeder Cage

The ARROW PRO Method Feeder Cage is also available in an enlarged, high-capacity XL version. This design is ideal when a larger quantity of feed needs to be introduced into the swim, whether during initial feeding or in the course of fishing.

TM669 — ARROW PRO XL Method Feeder Cage 30g

TM670 — ARROW PRO XL Method Feeder Cage 40g

TM671 — ARROW PRO XL Method Feeder Cage 50g

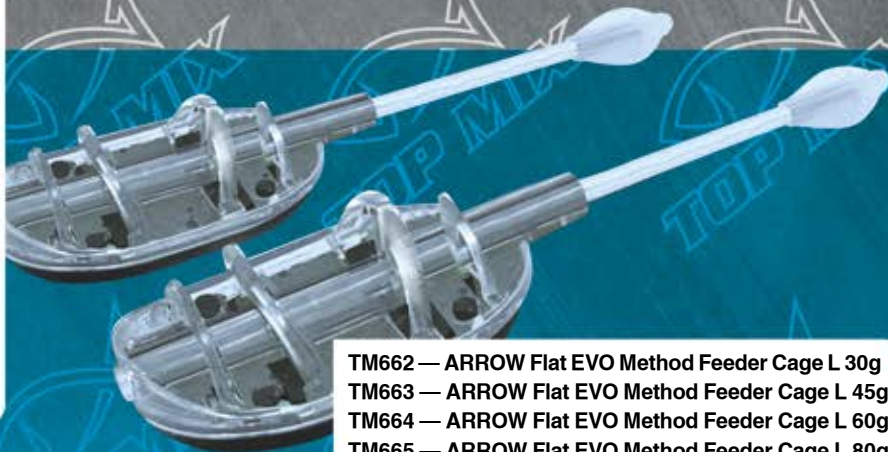

TM659 ARROW PRO Silicone Mould

Our ARROW PRO silicone mould is an in-house development, designed specifically for the ARROW PRO method feeder cages. This flexible silicone mould fits perfectly onto the ARROW PRO method cage. Thanks to its design, material, and the cage release mechanism, there is no stuck feed. It has no moving parts, so it's practically failure-proof. The design allows for quick, effective, and simple loading. Additionally, it can be used with other similarly sized and shaped method feeder cages.

ARROW Flat EVO Method Feeder Cage

The Arrow Flat Method Feeder Cage has been further developed into the EVO version, featuring a key new function: the cage is now removable from its stem, even without dismantling the rig or cutting the line. Its clear, transparent material does not create suspicion among fish feeding around the feeder. Thanks to the guiding stem and side fins, it casts very stably even at long distances, and it stays accurate even in windy conditions without wobbling mid-air. The small "gripping claws" on the bottom help the feeder stay anchored to the lakebed, preventing the feeder from sliding away even when the line is under tension. The middle ribs are angled, allowing the use of larger hookbaits too. These cages are available in both L and XL sizes.

- TM662 — ARROW Flat EVO Method Feeder Cage L 30g
- TM663 — ARROW Flat EVO Method Feeder Cage L 45g
- TM664 — ARROW Flat EVO Method Feeder Cage L 60g
- TM665 — ARROW Flat EVO Method Feeder Cage L 80g
- TM666 — ARROW Flat EVO Method Feeder Cage XL 30g
- TM667 — ARROW Flat EVO Method Feeder Cage XL 45g
- TM668 — ARROW Flat EVO Method Feeder Cage XL 60g

ARROW Flat Method Feeder Cage

Based on customer feedback, our two most popular method feeder cages have been the Arrow Pro and the Improved designs. The Arrow Flat Method was born from combining the best features of both.

Its clear material does not alert feeding fish around the feeder. The guiding stem and stabilizing fins ensure long-distance casting precision without air wobble, even in windy conditions.

The small gripping claws provide a firm hold on the bottom, so your feeder won't drift away even under line tension. The middle ribs are angled to accommodate larger hookbaits if needed.

Its universal shape fits most manufacturers' method feeder moulds.

- TM620 — ARROW Flat Method Feeder Cage L 30g

- TM618 — ARROW Flat Method Feeder Cage XL 45g
- TM619 — ARROW Flat Method Feeder Cage XL 60g

ARROW Flat Silicone Mould

Our ARROW EVO/Flat Silicone Mould is an in-house development, designed for use with both the ARROW Flat and ARROW Flat EVO method feeder cages. This flexible silicone mould fits both feeder types perfectly. Thanks to its material and the feeder release mechanism, no feed remains stuck inside. With no moving parts, the mould is practically fail-proof. Its design allows for fast, efficient, and simple loading. For compatibility, it is manufactured in two sizes, "L" and "XL". The mould can also be used with other similarly sized and shaped method feeder cages.

TM811 Universal Split Method Feeder Mould

A special split mould designed for TOP MIX and other manufacturers' method feeder baskets. After filling the basket, the mould can be opened, making removal easy and avoiding any sticking of the bait.

- TM660 ARROW Flat Silicone Mould „L“
- TM661 ARROW Flat Silicone Mould „XL“

ARROW 3 and 4 Rib Pellet Feeder Basket

3 and 4 ribbed method feeder baskets. The design ensures a forward-set center of gravity by concentrating more weight at the bottom, increasing casting distance and accuracy. Another special feature is the unique „dart” wing, which further improves casting distance and precision.

TM638 3 rib ARROW pellet feeder basket 25g
TM639 3 rib ARROW pellet feeder basket 35g
TM640 3 rib ARROW pellet feeder basket 45g
TM630 3 rib ARROW pellet feeder basket 55g
TM631 3 rib ARROW pellet feeder basket 65g

TM643 4 rib ARROW pellet feeder basket 45g
TM632 4 rib ARROW pellet feeder basket 55g
TM633 4 rib ARROW pellet feeder basket 65g

Improved Method Feeder Baskets

A method feeder basket with enhanced aerodynamic properties and internal line-guiding tube. Thanks to the guiding shaft, casting wobble is eliminated, leading to more accurate and longer casts. The longer shaft helps stabilize the line during flight, improving casting accuracy and potentially increasing casting distance by up to 15%. Especially useful when fishing with precision in tight spots or when you want more distance with lighter weights. Available in five sizes: 20g, 30g, 40g, 50g, and 65g.

TM750 Improved Method Feeder 30g
TM751 Improved Method Feeder 40g
TM752 Improved Method Feeder 50g
TM753 Improved Method Feeder 20g
TM754 Improved Method Feeder 65g

TM780

Method Feeder Guide Wing

Universal guide wing for TOP MIX method baskets, but also compatible with Preston and other brands. Simply attach to the pin at the front of the basket.

TOP DISTANCE Feeder Baskets

Developed specifically for long-range and accurate fishing. Unlike side-weighted baskets, these have bottom-end weighting, making them fly like an arrow. Larger versions can be cast 60—70 meters even in windy conditions with a medium-heavy feeder rod. Smaller sizes can easily be fished 20—40 meters even with a light feeder rod. Thanks to the bottom weighting, these baskets can even discharge their contents mid-water, making them especially useful in silty waters or when fish are feeding off the bottom.

TM728 TOP DISTANCE Feeder basket, „L” 30g
TM729 TOP DISTANCE Feeder basket, „L” 40g
TM730 TOP DISTANCE Feeder basket, „S” 30g
TM731 TOP DISTANCE Feeder basket, „S” 40g
TM732 TOP DISTANCE Feeder basket, „XL” 60g

CRAB River Feeder Baskets

Special feeder basket for river fishing. The two front legs should be bent to about a 45-degree angle before use. Under current tension, the legs dig into the bottom and anchor the basket firmly. The flow pushes the basket further into the substrate, enhancing stability. Despite its small size, it carries enough groundbait. Major advantage: where a standard 200g four-legged basket is needed, the 125g CRAB is sufficient. Easier to handle, less stress on the rod, thinner mainline can be used, and fewer fish lost during the fight.

TM706 — CRAB River Feeder Cage 100g
TM707 — CRAB River Feeder Cage 125g
TM708 — CRAB River Feeder Cage 150g

Method Feeder Circle Hooks

Japanese-made, almost circle-shaped hooks, highly popular among method feeder anglers. Large gape, flat hook point, short shank, excellent durability, chemically sharpened, micro-barbed and barbless versions, with black nickel finish and an eye. Ideal for use with bait spikes or hair rigs with pellets, wafers, boilies, or grains.

- TM974 Method Feeder Circle Hooks Barbed #6
- TM975 Method Feeder Circle Hooks Barbed #8
- TM976 Method Feeder Circle Hooks Barbed #10
- TM977 Method Feeder Circle Hooks Barbed #12
- TM828 Method Feeder Circle Hooks Barbless #6
- TM829 Method Feeder Circle Hooks Barbless #8
- TM830 Method Feeder Circle Hooks Barbless #10
- TM831 Method Feeder Circle Hooks Barbless #12

METHOD FEEDER Hooks

Japanese-made hooks, specifically designed for method feeder carp fishing. Large gape, strong shank, slightly outward bend, excellent point durability, chemically sharpened, Teflon-coated, micro-barbed, with an eye. Perfect for use with bait spikes or hair rigs with pellets, wafers, boilies, or grains. Currently available in three sizes.

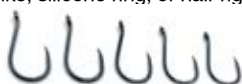

- TM920 Top Method Hooks #6
- TM921 Top Method Hooks #8
- TM922 Top Method Hooks #10

TM770 Bait Spike on Silicone Leader 7mm
TM771 Bait Spike on Silicone Leader 10mm
TM772 Bait Spike on Silicone Leader 15mm

Bait Spike on Silicone Leader

This solution eliminates the hassle of tying bait spikes. Simply cut the spike with the attached silicone leader from the strip, insert it into the bait, and hang the looped end onto the hook.

Fine Bait Spike

Designed for competitive method feeder anglers and for wary fish. Even delicate baits like bloodworm can be presented without issue with this tiny tool. The almost half-sized diameter also halves the spike's weight. Best used with hook-lengths between 0.06 and 0.10mm.

TM878 Fine Bait Spike Fine $\emptyset 0,3 \times 7$ mm
TM879 Fine Bait Spike Fine $\emptyset 0,3 \times 10$ mm

Bait Spike

The bait spike is designed for hair rig presentation of soft baits. Simply push it into the bait and you're ready to fish! The two small barbs on the shaft securely hold the bait, making even long-distance casts (up to 100 meters) trouble-free, even with soft pellets. It won't crack the pellet! Available in three lengths—7mm, 10mm, and 15mm—so you can choose the size to match your bait.

TM877 Bait Spike $\emptyset 0,6 \times 7$ mm
TM875 Bait Spike $\emptyset 0,6 \times 10$ mm
TM876 Bait Spike $\emptyset 0,6 \times 15$ mm

Red Bait Spike

The Red Bait Spike is thinner (0.45mm diameter) and lighter than the standard version. Designed for fine method feeder fishing, it's ideal for smaller wafers and delicate presentations.

TM768 Red Bait Spike $\emptyset 0,45 \times 7$ mm
TM769 Red Bait Spike $\emptyset 0,45 \times 10$ mm

Method Feeder Ready Rig

Simply insert the bait spike into the bait and you're done with baiting. This product solves both the bait spike mounting and rig-making issues, as it's ready to hang under the feeder basket.

TM880 Method Feeder Rig (#6 horog/7mm spike)
TM804 Method Feeder Rig (#6 horog/10mm spike)
TM805 Method Feeder Rig (#4 horog/10mm spike)
TM806 Method Feeder Rig (#8 horog/7mm spike)
TM807 Method Feeder Rig (#10 horog/7mm spike)

Silicone pellet Band

A special soft and elastic silicone band designed to hold the bait—not on the hook, but within the band. The hook is then attached through a small hole on the band's rim. This creates an almost invisible connection between bait and hook, which even the wariest fish won't notice.

TM773 Silicone Pellet Band „S”

TM774 Silicone Pellet Band „M”

TM775 Silicone Pellet Band „L”

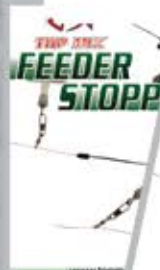

TM776 Silicone Hair Rig Set

The silicone hair rig is designed for easy mounting and hook attachment of baits like pellets, corn, or boilies. A baiting needle is needed to thread the bait onto the loop. The pack contains 3 different rig lengths, with 4 pieces of each length. Use the short ones for single grains or small pellets/boilies, and the longer ones for stringers or larger baits.

FEEDER Quick Change Swivels

Designed for fine feeder fishing, these quick-change swivels with rubber sleeves allow fast and easy hooklength replacement. Simply hook your rig onto the clip and slide the rubber sleeve over the hook to secure it. Ideal for the finest feeder or picker rigs. Available in two sizes: „S” and „M”.

TM635 Feeder Quick Change Swivel, „S”

TM636 Feeder Quick Change Swivel, „M”

Rubber Stoppers

High-quality, tight-fitting barrel-shaped rubber stoppers. Perfect for creating float, running ledger, or feeder rigs. Thanks to the pre-formed loops, they are easy to slide onto monofilament or braided mainline.

FEEDER Stoppers

Special rubber cones and stoppers designed for long hooklength feeder fishing to prevent tangles. These cover the connection between mainline and anti-tangle boom, or mainline and power gum, effectively acting as a shock absorber and feeder buffer.

TM637 Feeder stopper „S”

TM644 Feeder stopper „M”

TM645 Feeder stopper „L”

TM646 Feeder stopper „XL”

TM647 Rubber Stoppers „S”

TM648 Rubber Stoppers „M”

TM649 Rubber Stoppers „L”

Method Feeder Quick Change Beads

The quick-change bead is already widely used by method feeder anglers. Based on our own experience, we created our own range in multiple versions:

One is the traditional army green color—stronger than previous models, available in “S” size.

The other is made from fluorocarbon material, making it much less visible underwater. Available in two sizes—“S” for delicate fishing and “L” for anglers casting big feeders over long distances.

- TM655 Method Feeder Quick Change Bead „S”, army green
- TM656 Method Feeder Quick Change Bead „SS”
- TM657 Method Feeder Quick Change Bead „S”, fluoro clear
- TM658 Method Feeder Quick Change Bead „L”, fluoro clear

TOP Feeder Gum

The Feeder Gum acts as an elastic shock absorber between the mainline and thinner hooklengths. Its role is to distribute and compensate for sudden stress during casting, striking, and playing fish, helping to prevent lost fish or line breakages. Its relative stiffness also helps reduce tangles. Its stretch does not compromise strike effectiveness but prevents hooklength breakage under sudden loads.

- TM785 TOP Feeder Gum 0,6mm
- TM786 TOP Feeder Gum 0,8mm
- TM787 TOP Feeder Gum 1,0mm

X8 MONSTER Hooklength Braid

A high-quality, 8-strand, perfectly round-braided, top-tier hooklength line family. Thanks to the 8-strand weave, the line remains uniformly circular throughout its length, delivering high performance and strength.

Code	Diameter	Breaking Strain	Length
TM740	0,08mm	5,5kg	10m
TM741	0,10mm	5,9kg	10m
TM742	0,12mm	8,2kg	10m
TM743	0,14mm	9,5kg	10m
TM744	0,16mm	10,5kg	10m
TM745	0,18mm	13,2kg	10m

Fluoro clear Beaded Swivels

Specially designed stopper beads for inline feeder setups. The mainline passes through a fluorocarbon-covered swivel, ensuring a fixed, non-slip, tangle-free connection. Attach the hooklength to the other end of the swivel.

- TM777 — Fluoro Clear Beaded Swivel “S”
- TM778 — Fluoro Clear Beaded Swivel “L”

TM705 Digital Scale

Compact digital fishing scale for easy weighing of your catch.

Maximum load: 50 kg

Accuracy: 5 g

TM907 Bait Mixing Bucket with Bait Tray - 5L
TM904 Bait Mixing Bucket with Bait Tray - 10L
TM902 Bait Mixing Bucket with Bait Tray - 18L

5 and 10-liter flexible, elegant black buckets with lids, featuring 2 and 3-liter white bait trays (tray wall height: 6.5 cm). The pre-mixed groundbait can be stored in the bucket, while hook baits can be kept in the tray. Everything stays fresh and moist thanks to the well-sealing lid.

TM908 - 17 Liter Mixing Bucket
TM915 - Bucket Lid
TM916 - 12 Liter Mixing Bucket
 12 and 17-liter groundbait mixing buckets, internationally calibrated with internal liter markings.

TM917 - Plastic Tray
TM827 - Plastic Tray with Sieve Bottom
 Large bait tray suitable for storing groundbait or live bait. When used with the included sieve, it's perfect for draining and storing bloodworms. Size: 20 x 30 x 10 cm

TM885 Bloodworm Limiting Container
 FIPS competition-approved container for bloodworm limiting. The entire box is perforated, allowing the worms to stay alive when submerged in water until the measuring is completed.

TM856 - Bait Box 0.5L
TM857 - Bait Box 1.5L
TM858 - Pellet Soaker
 High-Quality Bait Boxes with Rubber-Sealed Lids and Pellet Soaking Inserts

Sieve-Bottom Bait Boxes

High-quality bait boxes with internal volume markings and mesh-lined bottoms, ideal for storing live bait. Comes with a lid.

TM850 Bait Box with Lid, Sieve Bottom - 0.5L
TM851 Bait Box with Lid, Sieve Bottom - 1L

TM862 - Small Bait Box
 (13 x 6 x 5 cm)

A handy little bait box, especially useful in tight spaces on your bait tray during competition fishing.

Standard Bait Boxes

High-quality bait boxes with internal volume markings and lids, suitable for storing live bait.

TM848 Four-Compartment Bait Box
TM852 Bait Box with Lid - 0.5L
TM853 Bait Box with Lid - 1L

Bloodworm Draining Sieves

The 16x16 cm sieve fits standard bait boxes. The larger 20x30x10 cm sieve is suitable for bigger containers.

TM854 Bloodworm Draining Sieve

TM855 Bloodworm Draining Sieve with Rim

TM918 Bloodworm Draining Sieve - 20 x 30 cm

Groundbait Sieves

Designed for sieving soil or groundbait to improve texture and consistency. Creates a finer, more homogeneous mix that breaks down better in water.

For buckets:

TM887 Groundbait Sieve — 2 mm (for bucket)

TM895 Groundbait Sieve — 4 mm (for bucket)

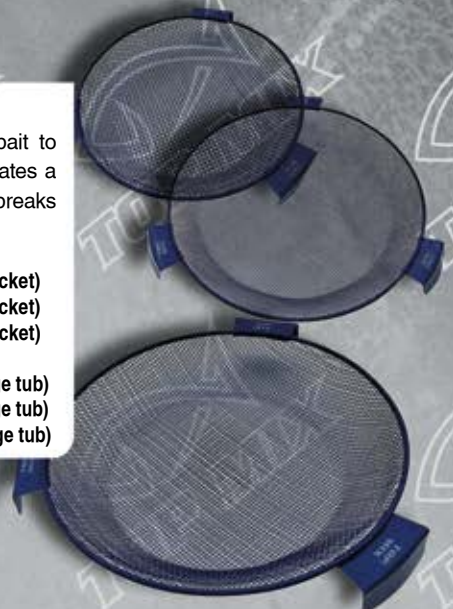

TM896 Groundbait Sieve — 6 mm (for bucket)

For large tubs:

TM899 Groundbait Sieve — 2 mm (for large tub)

TM897 Groundbait Sieve — 4 mm (for large tub)

TM898 Groundbait Sieve — 6 mm (for large tub)

Bait Limiting Container Set

For competition fishing, where live bait quantities are strictly regulated, this container set allows precise measurement. The original set includes 5 stackable containers: 1L, ¾L, ½L, ¼L, and 0L sizes. Two additional containers (1.5L and 2L) are now available as an extension set.

TM838 Limiting Container Extension Set (1.5L and 2L)
TM841 Full Bait Limiting Container Set

TM784 - Braided Line Cutting Scissors with Bent Nose

As the name suggests, this is more than just scissors: it also functions as pliers, a split ring opener, and a lead remover. The bent nose improves accessibility in tight spaces. Stainless steel with micro-serrated blades for clean, fray-free cuts on both braided and monofilament lines. Recommended for anglers who want a high-quality, multi-purpose cutting tool.

783 Ceramic Braid Scissors

For clean and hassle-free cutting of braided lines—much better than previous tools! The scissors feature ceramic cutting blades that won't dull over time (unless broken). Perfect for cutting all kinds of fishing lines, not just braid. The ceramic blades are housed in a stainless-steel spring-loaded handle to prevent rust.

Attention: Ceramic blades are brittle and can break if dropped on hard surfaces like rocks.

TM810 Method Feeder Rig Holder

Designed for storing the short braided rigs commonly used in method feeder fishing. Until now, storing multiple rigs of exactly the same length was a challenge with braided lines. The rig holder, developed by TOP MIX, solves this problem, offering storage for many pre-tied rigs.

TM704 Method Hook Box

The TOP MIX Method Hook Box is specifically designed for storing method feeder rigs. It can hold up to 12 different rig types at once, with each peg comfortably fitting 10 hooks. The specially shaped peg ends prevent rigs from slipping off. Suitable for 10, 12.5, and 15 cm rigs. Each box includes a sticker set for labeling hook and rig types. A magnetic closure and rubber gasket ensure your rigs remain secure and dry until you reach the waterside.

TM881 Adjustable Neoprene Rod Strap

A practical and clever solution for safely securing your rods. This adjustable-length, soft neoprene rod protector simultaneously protects both the tip and butt sections of your collapsed fishing rod. After finishing your fishing session, you can quickly, safely, and easily pack away your rods using this adjustable rod cap. Thanks to its stretchable length adjustment, it fits feeder, spinning, and carp rods, providing excellent protection for both rod ends.

TM860 Team Top Mix Distance Marker

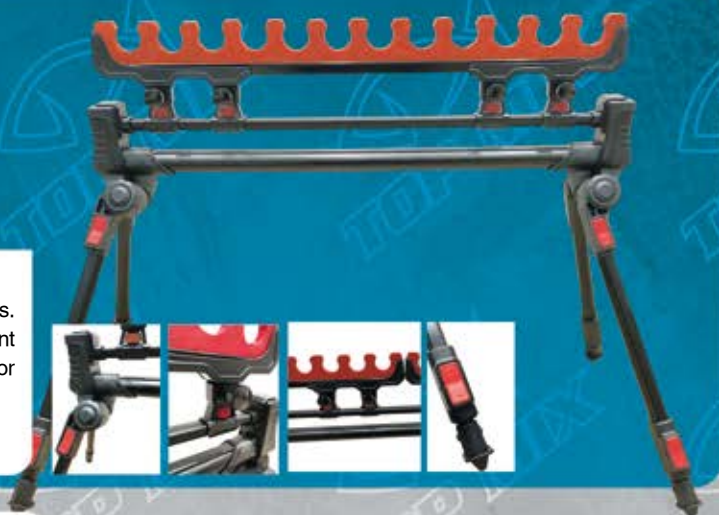

A complete solution for feeder anglers who prioritize precise casting. The set includes two banksticks and a 5-meter measuring cord. The banksticks feature threaded ends, making them easy to screw even into hard ground. Wrapping your line around the foam section helps protect the line's surface. The clips at the end of the cord can swivel as you screw in the banksticks, making setup easy and secure.

Four-Leg Match Rod Holders

High-quality four-leg rod support for storing up to 12 rods or top kits. Features include an extremely sturdy frame, stepless height adjustment from 30 to 60 cm, push-button foldable legs, and removable legs for compact transport. Comes with an elegant carrying bag.

TM987 Four-Leg Rod / Top Kit Holder for 12 rods

Rubber-Coated Landing Net Heads with Grip Frame

These landing net heads feature dense-mesh, fish-friendly rubber-coated nets. The frame is made of lightweight but durable aluminum profile. Thanks to the floating foam under the mesh, the net won't sink, making it much easier and quicker to handle in the water. A solid extra grip handle is fixed above the „Y” joint for firm and secure handling. Thanks to the rubber coating, the net does not absorb water and dries quickly after fishing.

TM882 Rubber-Coated Landing Net Head with Grip Frame, 40 x 50 cm

TM883 Rubber-Coated Landing Net Head with Grip Frame, 45 x 55 cm

TM931 Rubber-Coated Landing Net Head with Grip Frame, 50 x 60 cm

TM954 TOP MIX Floating Rubber-Coated Landing Net Head 50x40cm

An extra lightweight yet rigid landing net head with a strong frame, designed for carp fishing. The net material features a fish-friendly rubber coating, making it more durable and less likely for fish spines to get tangled. A floating foam layer sewn under the frame makes it easy to handle and speeds up landing in the water.

TM992 Team Top Mix Carp Match Keepnet 4m

A dense-weave match keepnet designed specifically for carp fishing. Its special material prevents the carp's dorsal fin spines from getting caught, and allows you to easily turn the fish forward inside the net while in the water. The robust aluminum frame holds the net securely, and the bottom section is extra reinforced to ensure the net sinks easily.

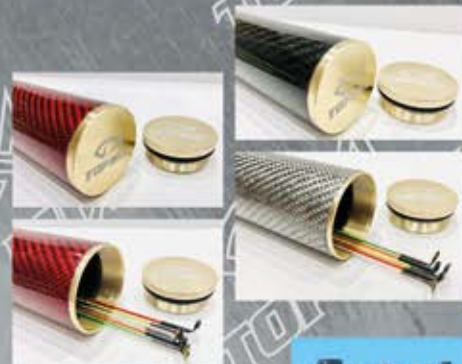

**TM821 Carbon Top Kit Tube,
Ø 45 x 1800mm**

A uniquely crafted, high-strength, multi-layer carbon tube with end caps at both ends, designed for the safe storage of pole fishing top kits. No need to worry about dents, warping, or sun damage.

TM820 Carbon Feeder Tip Tube

High-strength, multi-layer carbon tube for the safe storage of feeder rod tips. Comes with a threaded end cap for secure closure.

**TM822 Carbon Pole Tube,
Ø 60 x 1800mm**

A uniquely crafted, high-strength, multi-layer carbon tube for the safe storage of your valuable pole rods. Equipped with end caps at both ends to protect the rod during storage and transport.

**TM845 Top Kit Tube Ø 40mm x 160cm
TM846 Top Kit Tube Ø 50mm x 180cm
TM847 Pole Tube Ø 60mm x 180cm**

Durable storage and transport tubes for pole rods and top kits. These tubes provide excellent protection against scratches, dirt, and mechanical damage.

Line Marker

Designed for marking casting distances on your fishing line. Allows you to consistently cast to your baited area with precision. Available in white, yellow, red, and fluoro colors.

**TM859 Line Marker White
TM8592 Line Marker Red
TM8593 Line Marker Yellow
TM8594 Line Marker Fluoro Pink
TM8595 Line Marker Fluoro Yellow
TM8596 Line Marker Black**

864 Groundbait Mixing Paddle

Attachable to a drill for ultra-fast groundbait mixing. Saves time and produces a much better quality, more homogeneous mix. Thanks to the corrosion-resistant steel material and its efficient design, the entire bucket content can be mixed thoroughly in just a few minutes—eliminating the need for sieving.

**TM826 Method Wagglers 20g
TM837 Method Wagglers 25g**

Specially designed method waggles for midwater fishing. The feeding cage below the float is filled with method-mix groundbait or hook paste as usual. The bait—usually a pellet—is presented mid-water. The fine particles released from the cage attract fish below the float, enticing them to rise and eagerly strike the suspended bait.

Rod-Mounted Rig Winders

Practical rig winders for whip poles or top kits. Thanks to their clip-on design, no additional fixing elements are needed—just snap it onto the appropriate diameter section of your pole or top kit. Available in various sizes:

**TM960-27 For 10—13 mm diameter
TM960-36 For 11—14 mm diameter
TM960-45 For 12—16 mm diameter
TM960-54 For 15—20 mm diameter
TM960-63 For 19—25 mm diameter**

STRADIVARI 3-Compartment Hard Rod Holdalls

Made from premium, black carbon-patterned, waterproof material with matching gold-colored straps. These carefully crafted, elegant 3-compartment hard rod holdalls come with durable zippers and a gold TOP MIX logo. Tested to comfortably fit three feeder rods with large distance reels attached. Provides perfect protection for your assembled rods.

TM932 TopCam Hard Rod Holdall 140 cm

TM933 TopCam Hard Rod Holdall 160 cm

TopCam 3-Compartment Hard Rod Holdalls

High-quality, autumn waterside vegetation-themed, waterproof material combined with matching straps. Stylish, meticulously designed 3-compartment hard rod holdalls with strong zippers and a colored TOP MIX logo. Provides excellent protection for assembled rods. Available in two lengths.

TM958 TopCam Hard Rod Holdall 140 cm

TM959 TopCam Hard Rod Holdall 160 cm

TM924 TOP MIX WetNet Water Bucket

An ideal tool for anglers who often face difficulty collecting water from high banks or unstable riprap when preparing groundbait. This EVA water bucket comes with a 3-meter rope and a strong handle for easy water retrieval. The zipped mesh top also makes it suitable as a live bait holder for predator fishing.

Size: 20x20x20 cm

TM926 TOP MIX WetNet Keepnet Carry Bag

Thanks to its generous size and single-compartment design, this bag can comfortably hold two match keepnets side by side. Made from EVA material to prevent unpleasant odors and moisture from seeping into your car—even when storing wet keepnets.

Size: 50x60x20 cm

Team TOP MIX Bifocal Sunglasses

These bifocal prescription sunglasses are the ideal choice for anglers who want both eye protection and sharp vision. The diopter section at the bottom of the lenses allows for easy close-up focus, meaning you won't need to switch between your sunglasses and reading glasses. Comfortable, practical, and offering maximum protection while fishing!

Bifocal lenses available in 3 strengths: +1.5 / +2.0 / +2.5

Soft TPR nose pad for universal fit

Soft rubber for a non-slip grip UV400 protection

Comes with a hard protective case

TM823-1.5 Top Mix Bifocal Sunglasses +1.5

TM823-2 Top Mix Bifocal Sunglasses +2.0

TM823-2.5 Top Mix Bifocal Sunglasses +2.5

Team TOP MIX Shirts

TM794 Team TOP MIX Short Sleeve Technical Shirt

TM799 Team TOP MIX Long Sleeve Technical Shirt

TM800 Team TOP MIX Deep Blue Zip Hoodie

TOP MIX Caps

TM789 Fullcap Cap, White

TM801 Long Brim Fishing Cap, Sand Grey

TOP MIX Polarized Sunglasses

Polarized sunglasses ideal for fishing, designed to reduce water surface glare and protect against harmful UV rays. Thanks to the high-quality polarization coating, your eyes stay relaxed even during long fishing sessions.

Grey lenses: Recommended for bright sunny days

Brown lenses: Suitable for all light conditions

Ventilated design helps reduce fogging.

Additional advantages: easy to clean and maintain. Models TM814 and TM815 are buoyant and won't sink if dropped in water.

All sunglasses come with a hard protective case.
